Individual Reflection

Yazan Ghafir

DAT256 - Week 1

1 What do I want to learn or understand better?

A : In the LEGO exercise me and my team members have tried a practical iterative and incremental process of team working in Scrum style. We worked in team planning to solve distinguished problems, worked on the problems, reviewed the results to the product owners and reflected about the process. We have done several iterations in form of sprints until we did the requirements. That was really helpful to understand the Scrum process and with the two complementary lectures we have got a good start to prepare our self to begin the project.

B : I look forward to know about more practical problems in the Scrum process and typical solution for them. I look froward to have a deep understanding for the Scrum process stages with plenty examples about every step and how to deal with different potential issues.

A - B : That can be reached by doing more exercises, having more lectures and by a good team collaboration.

2 How can I help someone else, or the entire team, to learn something new?

A : Since we are not from the same program in the team we started to share some informations with each others about versioning and starting with git and also in the other hand about the meaning of sustainability in a software engineering project.

B : I look forward to share more informations with my team-mates.

A - B : One way to reach this goal is by acquiring a place for reports and information sharing in the team's meeting agenda.

3 What is my contribution towards the team's use of Scrum?

A : By participating in the team meetings, discussing the social contract and actively suggest and discuss the suggested Ideas about the project.

B : I look forward to actively do my activities as a team-member and also help my team-mates doing their activities following the Scrum methodology.

A - B : That can be reached by being active in the team, knowing more about Scrum, apply this knowledge and help my team-mates doing that.

4 What is my contribution towards the team's deliveries?

A : In this week I contributed towards the team's deliveries by discussing- and giving opinions about the social contract, the project idea.

B : My next contribution will include doing the business model canvas in the second week and to help with defining specifications of the project idea.

A - B : That can be reached by being active and prepare my self by learning more about BMC and prepare some suggestions about the project idea specifications.
